Agile User Stories & Acceptance Criteria

Student: Sourabh Shelke | Roll No: 23102C0029 | Class: BE CMPN (Computer Engineering)

User Story 1: Real-Time Verification Registry & KPIs

As an Underwriting Officer, **I want to** view a real-time dashboard displaying key verification metrics and document listings, **So that** I can instantly understand processing backlogs.

Acceptance Criteria: Dashboard renders within 1.5 seconds displaying Total Documents, Verified Count, Under Review Count, and Flagged Fraud Count with colored risk bars.

User Story 2: High-Risk Fraud Alert Trigger

As a Fraud Investigator, **I want to** be automatically alerted when an ingested document has a risk score ≥ 70%, **So that** I can intercept forged claims before approval.

Acceptance Criteria: System displays prominent warning banner when high-risk documents are present; clicking banner filters registry to flagged fraud cases.

User Story 3: Digital Document Intake & Registration

As a Policyholder or Intake Clerk, **I want to** submit new insurance document details via a web modal, **So that** the document enters the verification pipeline.

Acceptance Criteria: Modal validates Policy Number, Claimant Name, and Claim Amount; system generates sequential ID (DOC-2026-XXXX) and persists to H2 database.

User Story 4: Search & Multi-Status Filtering

As an Underwriter, **I want to** search documents by policy number or claimant name and filter by status, **So that** I can locate specific customer claim records immediately.

Acceptance Criteria: Instant search on keystroke input; status dropdown filters by SUBMITTED, UNDER_REVIEW, VERIFIED, FLAGGED_FRAUD, and REJECTED.
